

LEGEND

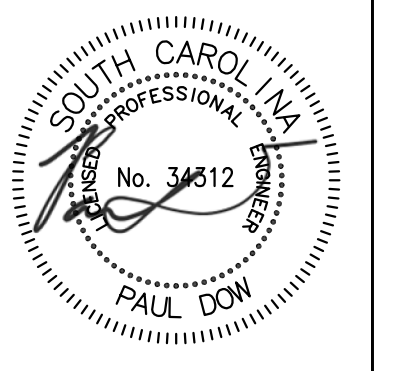

- EDGE OF PAVEMENT
- CONSTRUCTION LIMITS
- EXISTING CONTOURS
- PROPOSED CONTOURS

Grassing Notes

1. Areas to be grassed shall be defined as all areas of site within the grading limits and not occupied by paving or structures. Grassing shall include final shaping, liming, fertilizing and sodding.
2. Lime shall be agricultural grade, ground limestone. Ground limestone shall contain not less than 88% of calcium carbonate content equivalent and shall be such a fineness that 90% will pass through a 10 sieve and not less than 50% through a no. 50 sieve.
3. Fertilizer application shall be based on soil test results to minimize application rates and suitable for application with equipment, delivered to site in bags labeled with manufacturer's guaranteed analysis, and shall conform to all state and federal regulations.
4. Mulch shall consist of small grain straw of good quality, clean, free of noxious weeds, and reasonably free of other weeds. Spread mulch at a rate of 1 ton per acre on slopes up to 8.0% and a rate of 1/2 tons per acre from 8.0% up to a slope of 15%.
5. Spread lime at a rate recommended in the soil test results.
6. Areas that require re-fertilization and/or re-sodding will be designated by the engineer.
7. All disturbed areas are to be grassed immediately after construction in the area. At no time will an area be left bare for more than 14 days after completion of construction.

Grading Notes:

1. Limits for stream work are based on current survey information. Contractor shall stake locations for stream lifts, geo-lifts and rip rap limits and field verify and coordinate with city staff and adjust limits if necessary based on site conditions at the beginning of construction.
